CONTENTS

Volume 5, Issue Nos 1–8

COMMUNICATIONS IN APPLIED NUMERICAL METHODS

Issue No. 1, January 1989

On the Solution of Heat Conduction Problems Involving Heat Sources via Boundary-fitted Grids: G. M. Grandi and J. C. Ferreri 1

Calculation of Interior Values by the Boundary Element Method: K. D. Paulsen and D. R. Lynch 7

Computation of Electrostatic Field Distribution in a Cable by Least-squares Smoothing Finite Element Method: R. Lakshmipathi, Y. N. Rao and G. S. Rao 15

Domain Integration for Plate Bending Analysis by the Boundary Element Method: A. Abdel-Akher and G. A. Hartley 23

A Computational Procedure for Automated Flutter Analysis: D. V. Murthy and K. R. V. Kaza 29

Parallel Processing of Central Difference Transient Analysis for Three-dimensional Nonlinear Framed Structures: J. F. Hajjar and J. F. Abel 39

A Family of Predictor–Corrector Methods for Second-order Hyperbolic Equations: E. H. Twizell and A. Q. M. Khaliq 47

Advantages of Consistent over Lumped Methods for Analysis of Beams on Elastic Foundations: D. V. Griffiths 53

Issue No. 2, February 1989

An Improved Time Integrator for Finite Element Analysis: N. E. Bixler 69

Parametrized Multifield Variational Principles in Elasticity: I. Mixed Functionals: C. A. Felippa 79

Parametrized Multifield Variational Principles in Elasticity: II. Hybrid Functionals and the Free Formulation: C. A. Felippa 89

Predictions of the Combustor Coannular Swirling Flowfield Using a Modified Turbulent Kinetic Energy Equation: Y. C. Chao, W. C. Ho and S. S. Liu 99

Investigations Into the Numerical Solution of Partially Saturated, Porous-medium Flow: R. C. Dykhuizen 105

Indexed or abstracted by 'Abstract Jnl of Earthquake Engineering', 'Applied Mechanics Reviews', 'Cambridge Scientific Abstracts', 'CITIS-Civil Engineering Abstracts', 'Current Contents', 'Engineering Index Inc.', 'Eng. Societies Library', 'INSPEC', 'International Petroleum Abstracts', 'Mathematical Reviews', 'Newsletter of Engineering Analysis Software', 'Zentralblatt für Mathematik'.

A Single-step Algorithm for Oscillatory Problems: R. M. Thomas and S. J. Evans 113

A Pressure Cycle Control Algorithm for Superplastic Forming: J. Bonet, A. H. S. Wargadipura and R. D. Wood 121

First Comparisons Between Numerical Modelling and Experimental Analysis of Free Convection in a Rectangular Cavity: P. Baggio, C. Bonacina and M. Strada 129

Issue No. 3, April 1989

Numerical Analysis of Transient States in One-dimensional Non-linear Systems: A. J. Jordan and K. Aniserowicz 145

Thin Plates of Variable Thickness with Linear Flexural Rigidity: J. Q. Ye and H. H. Xiao 153

Direct Solution Procedure for Solution of Harmonic Problems Using Complete, Non-singular, Trefftz Functions: Y. K. Cheung, W. G. Jin and O. C. Zienkiewicz 159

A Simulation of Seasonal Temperature and Moisture Content Changes in the Ground: H. R. Thomas and R. C. Owen 171

Computer Economy and Accuracy of the Method of Lines Applied to Laminar Flame Problems: A. R. Eraslan and R. C. Brown 181

Numerical Determination of the Stress Intensity Factor K_I in Transient Thermal State: Application to the Cooling of a 'Penny Shaped Crack': G. Berthomieu, P. Jouanna and E. De Langres 191

Lifting Aerofoil Calculations Using Von Mises Variables: R. K. Naeem and R. M. Barron 203

Issue No. 4, May 1989

Inviscid Transonic Flow over a Wavy Wall Decaying Downstream: J.-J. Park and K.-S. Chang 219

A Consistent Mass EBE Algorithm for Linear Parabolic Systems: I. Gladwell, I. M. Smith, B. Gilvary and S. W. Wong 229

Direct Cubic Spline with Application to Quadrature: M. N. Anwar and M. N. El-Tarazi 237

An Accurate Five-point Implicit Finite Difference Method for Solving the One-dimensional Wave Equation: B. J. Noye and M. J. Rankovic 247

Behaviour of Five Solution Algorithms on Turbulent Calculations: Y. C. Chao and W. C. Ho 253

Two-level Finite Element Method for Plane Cracks: A. Y. T. Leung and S. C. Wong 263

A Method for Smoothing Derivatives of Multilinear Finite Element Fields: H. P. Langtangen 275

Issue No. 5, July 1989

Optimal Structural Remodelling—Simulation by Virtual Distortions: J. Holnicki-Szulc 289

A Note on a Method of Solution for Convective Stability Problems: A. A. Kolyshkin and R. Vaillancourt 299

On a Finite Element Method for the Calculation of Steady Cellular Interfaces in the One-sided Model of Solidification: A. A. Wheeler and K. H. Winters 309

Local Boundary Integral Equation Analysis of 2-dimensional Potential Problems Using Fourier Series: S. Askin and R. T. Fenner 321

Iterative Improvement of Eigensolutions from Reduced Matrices: G. Sauer . 329

Five-point FTCS Finite-difference Methods for Heat Conduction: B. J. Noye. 337

A Model of One-dimensional Primary and Secondary Consolidation, Based on Flow Channel Considerations: H. R. Thomas 347

Issue No. 6, August 1989

A New Boundary Element Method Coupled with FEM Packages: Luo Gangming 365

A Fast Numerical Algorithm for Calculating Electromagnetic Waves in an Inhomogeneous Slab: D. F. Winter and D. L. Bosley 373

Finite Element Computations for Second-order Hyperbolic Equations with Non-smooth Solutions: L. A. Bales 383

3-D Infinite Boundary Elements and Simulation of Monolithic Dam Foundations: Zhang Chuhan, Song Chongmin, Wang Guanglun and Jin Feng . 389

Anomalous Convection at Low Prandtl Number: K. H. Winters and R. O. Jack 401

Non-linear Dynamic Substructure Analysis Using Direct Integration of Steady-state Solution: E. C. P. Lima, A. L. G. A. Coutinho and J. L. D. Alves 405

The Control of Spurious Modes in the 20-noded Solid Isoparametric Element: P. Kelen 415

Issue No. 7, October 1989

Convergence Studies of Least-squares Finite Elements for First-order Systems: G. F. Carey and Y. Shen 427

A Finite Element Algebraic Closure Model for Turbulent Separated-reattaching Flows: M. D. Olson and Qin Zhong 435

An Algorithm for the Computation of the Tustin Bilinear Transformation: D. Westreich 443

Isentropic Flow with Cylindrical or Spherical Symmetry: P. Glaister 445

A Higher-order Method for Computing Eigenvalues of Two-point Boundary-value Problems: M. M. Chawla and R. Subramanian 455

Performance of Some Globally Mapped Lagrangian Elements: B. Nath 461

Solidification of Castings in Metallic Moulds: H. B. Naik and A. K. Dave 467

A Variable-density Mesh Generation for Planar Domains: S. Cescotto and Zhou Ding Wu 473

On a BEM Formulation for an Axisymmetric Heat-conduction Problem in a Transversely Isotropic Medium: R. Ishida and Y. Ochiai 483

Discussion of the Paper 'On the Numerical Instability of the Smeared-crack Approach in the Non-linear Modelling of Concrete Structures': R. de Borst 489

Authors' Closure of the Preceding Discussion 491

Issue No. 8, November 1989

Procedures for Residual Equilibration and Local Error Estimation in the Finite Element Method: D. W. Kelly and J. D. Isles 497

On the Front-tracking Scheme for Phase-change Problems: H. G. Askar and W. Abdul-Latif 507

Numerical Investigation of Heat and Mass Transfer during the Crystallization of Metal in a Mould: P. Vabishchevich and O. Iliev 515

A New Boundary Integral Equation–Finite-element Method for Clamped Orthotropic Plate Bending Problems: G. Shi and G. Bezine 527

A Finite-element Technique for Coupled Reaction and Heat Transfer Analysis with Negligible Mass Diffusion: C.-C. Lee 539

Spatially Regularized Solution of Inverse Elasticity Problems Using the BEM: N. Zabaras, V. Morellas and D. Schnur 547

Exact Integrals for Three-dimensional Boundary Element Potential Problems: D. E. Medina and J. A. Liggett 555
